github.com/Toby-SeoKyeong-Kim

## SKILLS

**Languages**  
Modern C++ · C · Python · C# · JavaScript  
· Csound · Max/MSP

**Audio**  
DSP · Audio Engine Architecture · Real-Time Systems · Procedural & Spatial Audio · Synthesis

**Game / Tools**  
Unreal Engine 5 (pro) · Unity (academic) · Compute Shaders · Editor Tooling

**CS / ML**  
Algorithms · Multithreading · Performance  
· Real-Time Neural Inference

## LANGUAGES

Korean — Native  
English — Professional Working

Audio Programmer building real-time audio systems, tools, and engine features for AAA game production. Strong foundation in DSP, computer science, and interactive audio, backed by graduate research in Sound & Music Computing. Combines formal music training with deep technical expertise to ship scalable audio technology for engineers and sound designers alike.

## EXPERIENCE

**Audio Programmer — Neople** Jul 2024 — Present  
Seoul, South Korea

- Develop and maintain real-time audio systems in modern C++ across multiple in-production titles, including **Overkill** and three further unannounced games.
- Architecting an in-house audio plugin bridging Neople's games and Wwise, with a node-editor + JSON system that lets designers and musicians work independently of programmers.
- Design reusable audio frameworks and editor tooling that streamline implementation and improve cross-project maintainability.
- Collaborate with sound designers and gameplay engineers to build scalable audio pipelines inside a proprietary engine.

## SELECTED PROJECTS

**Neople Audio Plugin Framework** C++ · Wwise · JSON  
Bridge layer between games and Wwise; a node-graph + JSON authoring system decoupling creative audio work from engineering, shared across four in-production titles.

**Real-Time Lip-Sync System** Unreal · Compute Shaders  
Lightweight neural lip-sync model integrated into Unreal's compute-shader pipeline for high-performance runtime inference inside a shipping game loop.

**Live Coding with Csound** · Thesis Csound · Python  
Python-driven live-coding environment for Csound enabling real-time synthesis and on-the-fly audio programming. Presented at the International Csound Conference, Vienna (2024). [github.com/Toby-SeoKyeong-Kim/CsoundLiveCodingwithPython](https://github.com/Toby-SeoKyeong-Kim/CsoundLiveCodingwithPython)

**VR Modular Synth Simulator** · Academic Unity · VR · Custom DSP  
Playable modular-synth rig in VR with patchable signal flow, powered entirely by hand-written DSP — oscillators, filters, and envelopes built from scratch with no external libraries.

## EDUCATION

**MSc Sound & Music Computing** Maynooth, IE  
National University of Ireland, Maynooth

**BM, Electronic Production & Design** Boston, US  
Berklee College of Music
